SUMMARY

Product Analyst with 8+ years of experience across AdTech and Logistics, including 4+ years in product-heavy roles at MiQ Digital. Adept at building scalable data products, running end-to-end feature rollouts, and translating analytics into \$4M+ business impact. Proficient in SQL, Python, PySpark, Looker Studio, and Tableau; experienced with platforms like Google ADH, Samba TV, and TTD. Strong in Agile delivery, stakeholder alignment, PRDs, and leading sprint rituals.

EXPERIENCE

APM at MiQ Digital(Short Term Rotation, Internal)

Apr 2025 – Nov 2025

Managed the development of innovative products in a fast-paced tech environment.

Bengaluru

- Worked on a campaign pacing problem. Interviewed junior traders, senior traders, and analytics leads, then dug into the logs to confirm the real issue 82% of campaigns were under- or over-pacing, not bidding or targeting problems as the team assumed
- Designed a chatbot-driven Trading Agent: traders type a natural language query, get a root-cause diagnosis and a draft DSP fix in one click. Built the architecture (pacing algorithm → budget allocator → recommendation engine → human approval), set guardrails (max 20% budget shift, 80%+ confidence required, full audit trail), and validated against 100 historical campaigns before any live commitment.

Product Analyst at MiQ Digital

Jul 2021 – Nov 2025

Bengaluru

- Built and launched ‘TV Intelligence’, a unified media planning platform for Linear, OTT, and YouTube; unlocked \$2.1M in new business in FY23–24.
- Localized and deployed the platform in AU, UK, and CA—driving \$2M+ incremental revenue with region-specific data integrations.
- Led architecture and development of PySpark pipelines with unit testing, reducing deployment time by 40% and improving data stability.
- Designed ‘Audience Mode’, a DSP+ACR-powered targeting engine that boosted digital ad ROI by 25% by identifying high-conversion geos and contexts.
- Owned feature validation and rollout of Audience Mode across AU and CA post successful POC—resulting in 3x client adoption within 2 quarters.
- Introduced ‘Incremental Reach’ and ‘Conversion Rate’ metrics into campaign dashboards, improving performance insights for 50+ advertiser accounts.
- Automated PPT generation for client reporting using API connectors, saving 80% of manual work for client-facing teams.
- Developed fuzzy string matching algorithm for advertiser mapping, improving data matching accuracy by 90% and enabling deeper insights.

Data Analyst – Spoton Logistics

Sept 2017 – July 2021

Bengaluru

- Designed hub optimization models using K-Means clustering, reducing service center costs by 12% and enhancing SLA compliance by 18%.
- Built Python tools that cut long-haul fleet costs by 2% via load consolidation logic and improved throughput by 5%.
- Developed DDPG-based reinforcement learning solution for line-haul network automation, enabling real-time routing decisions and cutting transit costs by 7%.
- Applied Knapsack and VRP algorithms to optimize last-mile delivery—reduced delivery costs by 9% across key urban zones.
- Created Dash-based performance dashboards adopted by leadership for real-time logistics operations visibility.

INDEPENDENT PROJECTS

Portfolio :- sshashvat.github.io

RideMaster — Group Ride Coordination App

May 2026

- Flutter frontend, Firebase backend, Google Maps/Directions/Places APIs. Real-time GPS tracking for motorcycle group rides with off-route detection, three ride modes (Solo, Group and Friend), and live rerouting.
- Role-based permissions: Marshals get 6 signals and can dismiss group-wide alerts. Riders get 4. The smart override system hides 'Off Route' and shows 'BREAKDOWN' if a rider has triggered that signal, prevents confusion in the drawer.

Overdraft in India: Why 75M Eligible Users Don't Activate

Apr 2026

- 30-page teardown of India's OD market. TAM/SAM/SOM built from EPFO FY2024 and SIDBI-CIBIL data — 99M eligible users, 24M active, 75M gap worth Rs. 3,850 Cr in annual revenue if 30% activates.
- Identified 5 cognitive biases causing overuse and non-activation (mental accounting, temporal discounting, illusion of control, low pain of paying, visibility decay) and mapped each to a specific product fix.

EDUCATION

Lakshmi Naraya College of Technology, Bhopal

B.E Information Technology engineering

Madhya Pradesh, IN

2013 – 2017

SKILLS

Soft Skills: Leadership, Collaboration, Communication, Analytical Thinking, Detail Oriented, Creativity, User Research, Competitive Analysis, New Product Launch, Product Strategy, Pricing Strategy, Agile Frameworks

Hard Skills: Confluence, Mixpanel, Agile Scrum, Figma, Pyspark, Python, SQL, JIRA, Postman, Excel
